

OT RT

OT RT

It's a 130 lt rectangular open top drum. Dimensions and weights of bodies, lids and galvanized steel rings are normalized to the European Standards. The rectangular shape, if compared to the common round one, has the following advantages:

- better stacking: on a 1000x1200 pallets 6 rectangular drums can fit vs. 5 round drums;
- better stacking in container: in a 20' ISO-CONTAINER 144 rectangular drums can be fitted vs. 108 round drums.

Despite its rectangular shape, this drum is very easy to handle and perfectly stackable.
