

# TH LR

## TH LR

Round drum with two 2" openings. The dimensions of the drum and the positions of the openings are in compliance with the European standard. The superior ring has been developed for an easy handling with the traditional pincers for steel drums and with the fork lifts. The dimensions have been studied in order to allow the loading of 80 pieces in an ISO 20' container. The shape of the upper part has been studied in order to guarantee an easy and complete emptying. Produced with co-extrusion technology, it has a neutral internal layer, in order to avoid the contact between the product and the colour pigments. This represents a big advantage both for the food and cosmetic sectors and also for all chemical products with high extraction characteristics.

### Dimensions

Model	Capacity litres	Weight Kg	B mm	H mm	D	I mm
